To provide a safer and more pleasant working environment, Sweco® offers a family of specially designed sound covers for all available size Sweco Vibro-Energy® Finishing Mills. The sound covers have been proven to reduce noise levels as much as 12 decibals, reducing the chance of hearing-loss related injuries in the workplace. Additionally, the covers meet OSHA noise abatement engineering controls (CFR 1910.95).

The covers are available in suspended or machine mounted designs. The free-standing units fit easily into existing production areas and do not interfere with current load, unload or process cycles.

The Sweco Sound Covers are manufactured using a strong walled plastic piping framework and sound absorbing foam, utilizing chemical resistant materials for an extremely durable construction, providing many years of reliable service.

One more innovative idea available from your industry leader . . . Sweco.
Safe and Easy to Use

Optional Floor Mounted Support Stand

An optional feature to the Sweco Sound Cover is a floor mounted support stand for easily moving the cover. With a simple pull of a rope, you can lower or raise your Cover on or off of your Vibro-Energy Finishing Mill. This will allow you to effectively maintain your machine without handling a bulky, awkward cover.

Improve Your Working Environment

- Reduces process noise 6 to 12 dBA
- Reduces the chances of hearing-loss related injuries
- Meets OSHA Noise Abatement Engineering Controls CFR 1910.95
