

# SWECO®

## VIBRATORY WASTE SETTLING TANK

**A**nother cost-effective accessory to your Vibro-Energy® Finishing Mill is the Sweco® Vibratory Waste Settling Tank. This plastic settling tank provides an effective method of effluent pretreatment. It greatly reduces suspended solids and eliminates foam from vibratory finishing effluent. Integrated filter bags are easily removed and disposable. This reduces the amount of maintenance associated with traditional weir-only settling systems. The unit is corrosion resistant and made of 100% polyethylene. It has no moving parts and, if properly maintained, offers many years of reliable operation. The system is designed for vibratory waste streams of up to 40 GPH.

### Each Vibratory Waste Settling Tank comes equipped with the following:

1 Settling Tank	2 Bag Retainer
1 Tank Cover	1 Inlet Fitting
2 Filter Bags	1 Outlet Fitting

### Dimensions

Bottom of Tank	24.0" x 12.0"
Top of Tank	26.25" x 14.25"
Overall Height of Tank with Cover	19.75"
Height of Working Area	18.0"
Inlet Fitting *	1.5"
Height of Inlet from Bottom of Tank *	15.5"
Outlet Fitting *	2.0"
Height of Outlet from Bottom of Tank *	15.0"

\* The size and height of the inlet and outlet can be customized to fit your application
